Published software

Personal GitHub repository: <https://github.com/BlasBenito>

- 2019 **memoria**, *R package available at [CRAN](#) and [GitHub](#).*, Tools to quantify ecological memory in long time-series with Random Forest models (Breiman 2001) fitted with the 'ranger' library (Wright and Ziegler 2017). Particularly oriented to palaeoecological datasets and simulated pollen curves produced by the 'virtualPollen' package, but also applicable to other long time-series involving a set of environmental drivers and a biotic response..
- 2019 **virtualPollen**, *R package available at [CRAN](#) and [GitHub](#).*, Tools to generate virtual environmental drivers with a given temporal autocorrelation, and to simulate pollen curves at annual resolution over millennial time-scales based on these drivers and virtual taxa with different life traits and niche features. It also provides the means to simulate quasi-realistic pollen-data conditions by applying simulated accumulation rates and given depth intervals between consecutive samples..
- 2019 **distantia**, *R package available at [GitHub](#).*, Tools to assess the dissimilarity between multivariate time series by using the psi measure described in "Numerical methods in Quaternary pollen analysis" (Birks and Gordon, 1985). The algorithm computes a matrix of distances (euclidean, manhattan, chi) between all sample pairs, and minimizes the sum of distances, constrained by sample order..
- 2019 **palaeoFireModeling**, *Netlogo model available at [GitHub](#).*, This is a spatio-temporal simulation of the effect of fire regimes on the population dynamics of five forest species (*Pinus sylvestris*, *Pinus uncinata*, *Betula pendula*, *Corylus avellana*, and *Quercus petraea*) during the Lateglacial-Holocene transition (15-7 cal Kyr BP) at El Portalet, a subalpine bog located in the central Pyrenees region (1802m asl, Spain)..
- 2019 **rangeShiftSimulation**, *Netlogo model available at [GitHub](#).*, Mechanistical model simulating the range shift of *Quercus pyrenaica* in the Sierra Nevada National Park (Granada, Spain) under different climate warming scenarios. Range shift is modeled as an emergent property of the acorn-dispersal behavior of the Eurasian Jay, the changing climatic conditions in the tree line, and the topographic structure of the terrain..
